

Figure 7-B

Raw coronal image (05:44 14 April 1980) from the north sector view of the SMM Coronagraph/Polarimeter instrument. A loop-like coronal mass ejection is in progress over the north pole of the sun. Note the enhanced sensitivity of the vidicon in the lower left corner and the upper portion of the image.

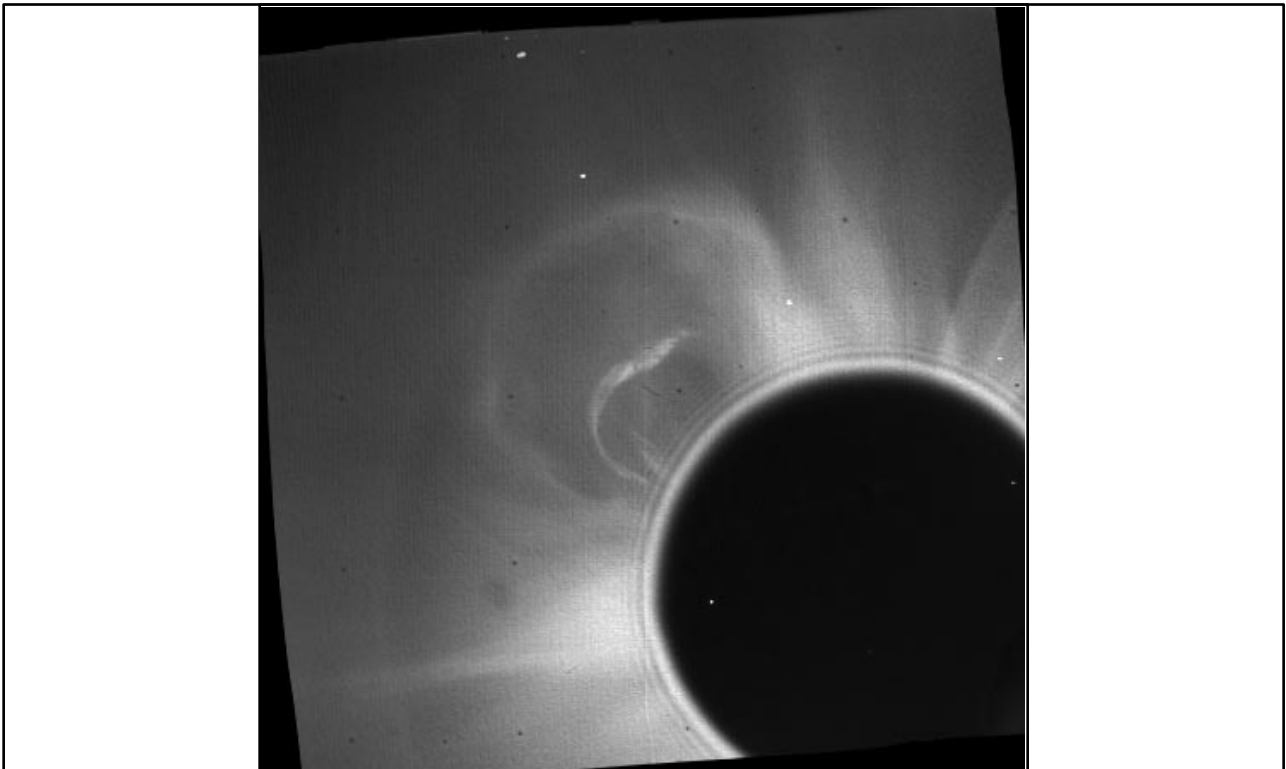

Figure 8-B

North sector coronal image taken at 05:44 on 14 April 1980 by the SMM Coronagraph/Polarimeter. This image has been photometrically calibrated and corrected for geometric distortion.
